

YellowPallet™

OUR COMPANY

The Dutch Limited company Yellow Pallet B.V. was first established in January 2012. Yellow Pallet offers turn-key pallet factories as well as sustainable pallets made of wooden planks and banana fiber blocks.

With the support of Startlife, Oost-NL, Wageningen University & Research, impact-investor BothSidesNow, the strategic partner in mechanical engineering IMAL and the Costa Rican pallet company Corporacion Wofar Tara, Yellow Pallet has been able to conduct research, execute tests and construct a reference factory in Costa Rica with banana stem harvesting models and techniques. The factory is operational and supplying pallets made of banana fiber blocks and wooden planks to customers in Costa Rica and Panama.

“We remain inspired as the first step towards replacement of 30% of the wood in pallets has been achieved. We continue to develop technology to replace all wood in pallets in the tropical zone. Its social, economic and environmental impact are important, providing a sustainable business model for the transportation industry and producers in general.”

Hein van Opstal – Executive Director Yellow Pallet
Gert Kerma – Professor Wageningen University & Research
